## DETAILED ACTION

### *Allowable Subject Matter*

**Claims 1-20** are allowed.

Regarding claims 1-10, the prior art is not found to teach or fairly suggest, in combination with the existing elements of the present claim, a gear-rotatable camera support, with a rotatable section having annular steps that correspond to the steps of a spindled stationary base, and a cover attached to the rotatable section for exterior support of the camera.

Regarding claims 11-19, the prior art is not found to teach or fairly suggest, in combination with the existing elements of the present claim, an adjustably rotatable camera support, in which the gear-motor is attached to the stationary section, and which also includes magnetically responsive sensors actuated upon rotation of the rotatable section; where the rotatable section includes exterior support for the camera.

Regarding claim 20, the prior art is not found to teach or fairly suggest, in combination with the existing elements of the present claim, a method for adjusting the arc of rotation of a camera employing magnetically responsive sensors and corresponding magnetic actuators for rotating the camera in selective response to rotational signals.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Smith (US #4,543,609) discloses predetermined rotational limits of a camera.

Schneider (US #6,735,382) discloses a sealed camera housing.

Kurtman (US #4,736,218) discloses a gear-driven rotated camera.

Ellenberger et al. (US #5,224,675) discloses a camera mounting apparatus for monitoring a predetermined area of observation.

Richards et al. (US #6,027,257) discloses a gear-driven rotatable pan/tilt videoconference or surveillance camera.
